BIRD, INSECT &c.

IN A SERIES OF

PLATE-GARDENS

By E. J. M. B. &c.

1870

INTRODUCTION.

TO facilitate the attainment of Natural Knowledge in one of its most considerable branches, and to gratify the imagination with one of its most elegant amusements, are the objects of this collection. The one is aimed at by the choice; the other principally by the arrangement.

Birds are, perhaps, the most pleasing of the animal species; they are the most lively and active of all the creatures that are endued with self-motion; and they are adorned with all the splendid colours of whatever is most beautiful in the vegetable world; they are more active than beasts or men; they are more shewy and variegated than flowers; there is, therefore, no province in all natural history, that is so accommodated to afford a useful, and at the same time, a rational entertainment, to all tastes, and to every stage of life. For, whilst the more intelligent see with astonishment the operations of an all-wise providence, the more gay and superficial will be engaged by the finest shew in nature.

For these purposes, the Proprietor, with great expence and infinite labour, has drawn together into one point of view this Cabinet. They are prepared by an art, he flatters himself, never equalled by the most celebrated preparations, in all the lustre of their native
and

I N T R O D U C T I O N.

and original colours, and disposed in such a manner as to preserve all the spirit of their living attitudes, and those peculiar movements which characterize each species.

But though Birds form the principal part of this collection, they do not compose the whole of it. In order to enlarge and diversify this exhibition, several beasts are taken in, and many curious and beautiful insects, all in high preservation.

If to have chosen a proper object for the public entertainment, and to have laboured to bring it to all possible perfection, be the way to deserve encouragement, He hopes to meet with it, in a discerning age, and a generous Nation.

THE
COLLECTION
OF
BIRDS.

In Case Numb. 1.

THE Redstart, cock and hen, and White
Wagtail, nest and eggs
Numb. 2.

The Hawfink and Wrens, male and female,
